To whom it may concern,

I'm writing to recommend Buyantuev Alexander for the master degree program "AI Talent Hub". I've had an opportunity to interact with Alexander for the past year within a number of projects related to FEC and RL domains of knowledge. Primarily, I would like to highlight his ability to analyze sophisticated problems and synthesize new artifacts which are valuable for the team.

During his participance in the FEC-related project, he was able to deliver a qualitative literature review on the topic. Moreover, he was able to interlink this area of research with modern ML methods like reinforcement learning. Afterwards, based on Alexander's research, the team (incl. Alexander) was able to produce code artifacts that was recognized and deployed in the real network all over the world.

Furthermore, I can underline his creativity upon other activities. Alexander highly actively participates in department activities, open lectures and team buildings that showcases him as a collaborative member of the collective.

However, one fact needs to be remarked: he has a little gap of the knowledge related to finite field algebra. Therefore, his knowledge about groups, factorization and prime fields should be extended.

Despite this, I am strongly recommended Buyantuev Alexander for the master degree program "AI Talent Hub". Owing to his motivation and hunger for knowledge this gap will be covered as soon as possible. He would be an excellent student at this program.

Please feel free to contact me at any time for further details.
